

Power Control Hubs:

Price starts at \$1,250

The Power Control Hub, Model PC-0101-W is a satellite of the *PowerTraker* and can be used to control up to four AC power relays. This hub allows the user to turn the AC power ON or OFF directly from a computer or cell phone browser or automatically based on time of day and/or sensor conditions. AC power, voltage and current values are monitored and logged for analysis.

Communication with the *PowerTraker* can be hard wired or wireless.

Enclosure size and design varies based on your power needs.

Other Power Control Hub models are available and can be customized.
